STORAGE BOX - ASSEMBLY INSTRUCTIONS

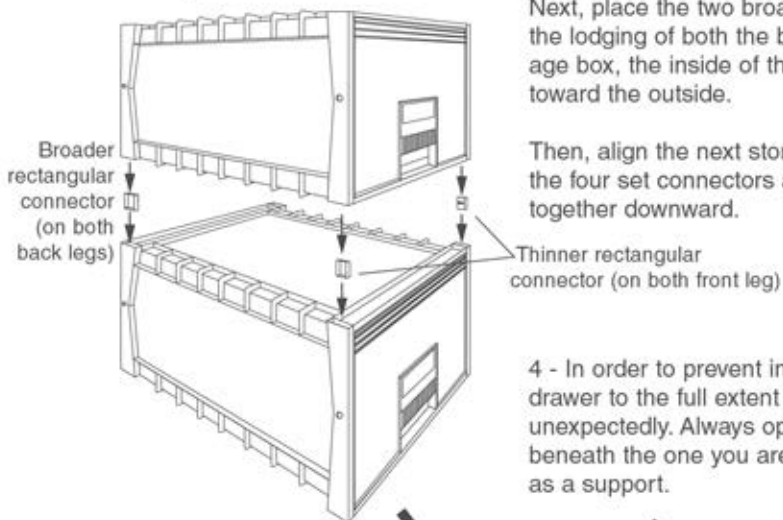

Your new storage box comes already assembled and ready to put to use, as a single unit. However, if you wish to stack or align several of these boxes together, please follow those very simple steps :

1 - Cut loose the provided connectors coming in your kit, from their injection molding strip.

2 - In order to connect several boxes sideways, first insert the round connector inside the hole on both front and back legs of the first storage box, and then snap the next box onto the connectors.

3 - In order to stack several boxes on top of one another, first place two of the thinner rectangular connectors into the lodgings of both the front legs of the storage box, the inside of the connector facing toward the outside.

Next, place the two broader connectors into the lodging of both the back legs of the storage box, the inside of the connector facing toward the outside.

Then, align the next storage case on top of the four set connectors and snap them together downward.

4 - In order to prevent injuries, never pull the drawer to the full extent or it might fall out unexpectedly. Always open the drawer beneath the one you are referencing, using it as a support.
