Children's Product Certificate

Date of Certificate: 23 September 2022

Product Overview

Product Reference Image

Product Name:	2000531- Kids Shovel (Red)
Date of Manufacture:	Aug. 2022
Place of Manufacture:	2500 Guenette Saint Laurent, QC H4R 2H2
Imported By:	Era Group Ltd.
Manufacturer:	Era Group Ltd.
Part Number:	Multiple

Testing and Records Overview

Test Date: September 23,2022 Test Location and Contact Information
Cambridge Materials Testing Limited 6991 Millcreek Drive, Unit 13 Mississauga, Ontario L5N 6B9 Canada (905) 812-3856

Certification Issued and Test Records Maintained By
Era Group Ltd. 2500 Guenette Saint Laurent, QC H4R 2H2 Canada Gilad Ben-Or giladb@storex.ca

Era Group Ltd. certifies that the above product complies with the following rules bans, regulations and standards:

- US Consumer Products Safety Improvement Act of 2008:
  - Section 101 Products containing Lead
  - Section 108 Products containing Phthalates
  - Section 106 Mandatory Toy Safety Standards
- ASTM F963-17 Standard Consumer Safety Specification for Toy Safety
- Canada Consumer Product Safety Act: Toys Regulation (SOR/2011-17)

- CPSC-CH-E1002-08.3 Standard Operating Procedure for Determining Total Lead (Pb) in Nonmetal Children's Products
- CPSC-CH-C1001-09.4 Standard Operating Procedure for Determining of Phthalates
- 16 CFR 1500.44 Method for Determining Extremely Flammable and Flammable Solids
- 16 CFR 1500.48 Technical Requirements for Determining a Sharp Point in Toys and Other Articles Intended for Use by Children Under 8 Years of Age
- 16 CFR 1500.49 Technical Requirements for Determining a Sharp Metal or Glass Edge in Toys and Other Articles Intended for Use by Children Under 8 Years of Age
- 15 CFR 1501 Method for Identifying Toys and Other Articles Intended for Use by Children Under 3 Years of Age which Present Choking, Aspiration, or Ingestion Hazards Because of Small Parts.
- Health Canada Method M00.1 Small Components (Effective 2019-07-02)
- Health Canada Method M00.2. Sharp Edges (Effective 2021-04-22)
- Health Canada Method M00.3 Sharp Points (Effective 2021-01-15)
- Health Canada Method M01.1 Reasonably Foreseeable Use – Toys (Effective 2019-02-18)

		Received Date:	September 21, 2022
Attention:	Gilad Ben-Or		
Specimen:	Consumer Products		

CERTIFICATE OF ANALYSIS

Five (5) children's product specimens were submitted for representative testing to be analyzed as per ASTM F963-17, for several parameters and for Phthalate Content, in order to determine compliance with the US Consumer Products Safety Improvement Act of 2008 and the Toys Regulations (SOR/2011-17) of the Canada Consumer Product Safety Act (CCPSA). The submitted specimens were identified as follows:

#1: 3000333 – 21x46 "Torpedo" Sled (Green)

#2: 2000531 – Kids Shovel (Red)

#3: 2000531 – Kids Shovel (Pink)

#4: 2000531 – Kids Shovel (Blue)

#5: 3000940 – 24x24 "Spiral" Sled (Blue)

TOYS REGULATIONS (SOR/2011-17)

RESULTS

Mechanical Hazards		RESULTS		
		Specimen #1	Specimen #2	Specimen #5
Small Parts section 7(1)	A toy that is likely to be used by a child of less than three years of age must not contain a part that is meant to be separable or may become separated with reasonably foreseeable use of the toy and that can be totally enclosed in the small parts cylinder illustrated in Schedule 1 using a force of not more than 4.45N.	**Pass**	**Pass**	**Pass**
Metal edges section 8	A toy's exposed metal edges must be folded back or sprayed with or dipped in paint or otherwise treated so that all sharpness and burrs are eliminated.	N/A	N/A	N/A
Wire Frames section 9	A wire frame or structure that is embedded in a toy must have its wire ends covered, turned in or turned back so that no sharp ends become exposed with reasonably foreseeable use of the toy.	N/A	N/A	N/A
Plastic Edges section 10	A part of a toy that is made of plastic and that could, when broken, have exposed sharp edges must meet at least one of the following requirements: (a) it must be sufficiently thick to resist breakage with reasonably foreseeable use of the toy; or (b) it must be made of inherently tough materials, if the part is necessarily thin because of the toy's function	**Pass**	**Pass**	**Pass**
Wood section 11	A toy's exposed wooden surfaces, edges and corners must be smoothly finished.	N/A	N/A	N/A
Glass section 12	A toy's exposed wooden surfaces, edges and corners must be smoothly finished.	N/A	N/A	N/A
Fasteners section 13(1)	A fastener that is used in the construction of a toy must not, because of its type, size or manner of use, cause personal injury with reasonably foreseeable use of the toy.	N/A	**Pass**	N/A

Laboratory # 896740-22
ERA Group Ltd.

Mechanical Hazards		RESULTS		
		Specimen #1	Specimen #2	Specimen #5
Fasteners section 13(2)	The following fasteners must meet the following requirements: (a) nails and staples must be properly attached; (b) flat head or oval-head wood screws of the countersunk-head type must be properly countersunk; (c) wood screws must be free of exposed burrs; (d) fasteners for use in upholstery or similar fasteners must be properly attached and of a type that, if exposed, would not be a hazard; and (e) threaded bolts must be protected by acorn or similar nuts or protective caps, unless the bolts are so placed that they protrude into a protected area where contact with the threaded ends is not likely to occur.	N/A	**Pass**	N/A
Safety stops or locking devices section 14	A toy's folding mechanism, bracket or bracing must have a safety stop or a locking device to prevent the toy's unintentional collapse.	N/A	N/A	N/A
Spring-wound driving mechanisms section 15	A spring-wound driving mechanism that is an integral part of a toy — other than a construction set — and that could injure a child's finger must meet all of the following requirements: (a) its moving parts must be enclosed so that they cannot be touched with reasonably foreseeable use of the toy; (b) its outer case must be able to withstand reasonable abuse if damage to the case would cause the mechanism to be exposed; (c) in the case of a toy with a non-detachable winding key, the key must be of a shape and size that does not allow a child's finger to become caught in it; and (d) in the case of a toy with a detachable key or starting handle, the clearance space between the detachable key or starting handle, when it is in place, and the rest of the toy must be less than 2 mm (1/16 inch) or more than 10 mm (3/8 inch).	N/A	N/A	N/A

Mechanical Hazards		**RESULTS**		
		Specimen #1	**Specimen #2**	**Specimen #5**
Projectile Components section 16	The projectile component of a toy — other than a rocketry component — that is capable of causing a puncture wound must have a rubber tip or other durable fitting placed on its leading end that is able to withstand a pulling force of 44.5 N (10 pounds).	N/A	N/A	N/A
Enclosures section 17	A toy with both of the following characteristics must have holes of sufficient size and number in each of two or more adjacent sides to prevent the suffocation of a child that is enclosed in the toy: (a) it is large enough for a child to enter or be placed inside; and (b) it has an opening that can be closed by a lid or door.	N/A	N/A	N/A
Stability section 18	A stationary toy that is intended to bear the weight of a child must stand level and firm when it is used.	**Pass**	N/A	**Pass**

REASONABLY FORESEEABLE USE – TOYS

Health Canada Method M00.1 Small Components (Effective 2019-07-02)
Health Canada Method M00.2 Sharp Edges (Effective 2021-04-22)
Health Canada Method M00.3 Sharp Points (Effective 2021-01-15)
Health Canada Method M01.1 Reasonably Foreseeable Use - Toys (Effective 2019-02-18)

Mechanical Hazards		RESULTS		
		Specimen #1	Specimen #2	Specimen #5
Small Components	Description of product that was totally enclosed in the Small Parts Cylinder. If the product was totally enclosed with or without force or manipulation. If force or manipulation was required, include the force and the type of manipulation. The section of the test method the sharp edges were produced/ observed.	No small components were found before or after reasonable foreseeable use	No small components were found before or after reasonable foreseeable use	No small components were found before or after reasonable foreseeable use
Sharp Edges	The location of any sharp edges. If any sharp edges cut the test tape and if so, the length of the cut. The section of the test method the sharp edges were produced/ observed.	No sharp edges were found before or after reasonable foreseeable use	No sharp edges were found before or after reasonable foreseeable use	No sharp edges were found before or after reasonable foreseeable use
Sharp Points	The location on the product of any projections, corners and any surface deformations that activated the sharp point tester.	No sharp points were found before or after reasonable foreseeable use	No sharp points were found before or after reasonable foreseeable use	No sharp points were found before or after reasonable foreseeable use
Drop Test	Drop platform height. The drop orientations with photographs if necessary. If batteries were included during the drop test (if necessary). Any damage to the product. Any small components, sharp edges observed during drop testing.	0.909 m height using various orientations. No Damage, No small components, sharp edges or sharp points were observed after test.	0.909 m height using various orientations. No Damage, No small components, sharp edges or sharp points were observed after test.	0.909 m height using various orientations. No Damage, No small components, sharp edges or sharp points were observed after test.
Push/Pull Test	The location of any push/pulls that caused damage or separated a component. The peak force used to separate the component. Any small components, sharp edges observed during the push/pull tests.	No Damage. No small components, sharp edges or sharp points were observed after test.	No Damage. No small components, sharp edges or sharp points were observed after test.	No Damage. No small components, sharp edges or sharp points were observed after test.
